DETAILED ACTION

Allowable Subject Matter

1. Claims 1-3, 6-35 and 37-43 have been found allowable.

The following is an examiner's statement of reasons for allowance:

Methods for the production of energy from coal are generally well known in the art. Applicant's invention is directed toward a method of producing energy in the form of hydrogen rich gases from coal utilizing a fixed bed gasification system wherein coal is fed into the top of the gasifier and moves down as a solid bed, and the coal/char is consumed at the bottom. Applicant's invention further requires the flowing of a raw second gas together with a molten slag through a common port out of the gasifier, requiring the heat of the aforementioned slag.

Applicant's argument that, in a fixed bed system, the prior art does not teach flowing a lean gas together with slag through a common port out of the gasifier to maintain the port open for the free flow of the second gas and molten slag, is accepted as overcoming the a prima facie case of obviousness. As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
